

## ABSTRACT

A lower leg massager according to the invention is capable of massaging lower legs of a user, and has a structure with reduced size which can be manufactured with reduced costs. The lower leg massager includes a leg-rest 2 provided with a first massaging mechanism 4 disposed therein for massaging each calf of right and left lower legs, a footrest 3 disposed on an end of the leg-rest and provided with a second massaging mechanism 5 disposed therein for massaging each foot of right and left lower legs, and a driving mechanism 10 disposed at an intermediate position in a right and left direction of the leg-rest 2 and/or the footrest 3 for simultaneously driving both of the massage mechanisms 4, 5.
